

AccuCrank™

Hog Slat's new AccuCrank™ offers producers precise feeder adjustment designed to reduce wastage.

Available on all Hog Slat nursery, wean/finish, and finish feeders.

Fine Tune Adjustment

Screw adjustment moves the feed gate 1/16 of an inch per revolution, allowing fine-tuned feed gate positioning. Plus, the feed gate can be "locked down", shutting it off completely.

Adjustable Index

Easy-to-read numbered scale permits calibrated settings that are repeatable from group to group. Producers can establish protocols based on specific pig ages or size.

Positive Lock Slots

Positive Lock Slots prevent pigs from wiggling the slide gate out of adjustment.

AccuCrank™ Handle

AccuCrank™ Handle is bent at a straighter angle for a more comfortable grip. Features a large 1" head with a nylon insert for smooth and stable adjustment.

Accurate. Repeatable.

The AccuCrank™ is "factory-zeroed" for consistent and accurate settings.

AccuCrank™ is recessed below the top of the feeder to prevent damage when feeders are inverted for cleaning. This lower position prevents pigs from gaining access to the top.
